## PRIVATE LOCATE SERVICES

---

Private locates are those not covered by the Alberta One-Call Corporation. These include private facilities constructed on private land or in rights-of-way on public lands. One-Call only locates facilities owned by One-Call participants and marks those only as far as the power meter, the telecommunications connector box, the water valve or the natural gas meter. All other facilities and connections are the responsibility of the land or home owner.

CLI offers the following services to persons and companies who own such facilities:

- ☑ ***Hot-Shot (Emergency) services*** with a 2 hour or less response time.
- ☑ ***Hydrovac standby service available.***
- ☑ ***Standard 48 hour basic locating services***
- ☑ ***Specialized/project services*** environmental and geotechnical studies, real estate development, plant sites, well sites, gas stations and home owners.

If you are not sure whether One-Call services are available to you, please call us for free consultation.

A fee schedule for our private locating services is available through CLI's HQ toll-free number and via e-mail ([info@canadianlocators.com](mailto:info@canadianlocators.com)).

## PIPELINE LOCATES

---

CLI works for ATCO Pipelines and EPCOR. In serving these customers, as well as the City of Calgary Waterworks Department, CLI crews have made over 100,000 locates of high pressure and utility pipelines during 2002.

## OILFIELD LOCATING AND MAPPING

---

Older oilfields often have inaccurate maps of gathering systems, power lines and telecommunications lines. All these facilities must be identified and marked before excavation, water well, geotechnical test-hole, big rig drilling or seismic data acquisition programs begin. CLI staff will be pleased to help you design your program safely and mark these facilities on the ground. Call us for an estimate.

## CLI WARRANTS ITS WORK

---

Having achieved a very high standard of underground locating, CLI is pleased to offer its clients and customers a limited warranty covering errors and omissions. Call CLI for details.

## WIRELESS INTERNET OPERATIONS AND WWW.LOCATORBASE.NET

---

CLI realizes enhanced productivity from its use of the [www.LocatorBase.net](http://www.LocatorBase.net)<sup>™</sup>, the proprietary Internet portal for online dispatching, operations management, and quality control. [LocatorBase.net](http://www.LocatorBase.net)<sup>™</sup> technology allows CLI to offer hot-shot and emergency service with very short lead times, economically and without compromising safety. Clients also realize significant savings through reliable, on-time arrival of locating personnel.

CLI also improved quality of service to its customers by reducing hits by over 50% on a year to year basis, as verified by Calgary One-Call Corporation data. CLI maintained an exceptional record of 0.114 hits per 1000 locates (all utilities found without damaging the cable or other buried utility assets) from 1997 to 2003.
